

2024

**Taiwan Trade Delegation
to the Middle East**

———— **May 24 - Jun. 4** ————

About TAITRA

Founded in 1970, TAITRA is Taiwan's foremost nonprofit trade promoting organization. Sponsored by the government and industry organizations, TAITRA assists enterprises to expand their global reach. Headquartered in Taipei, TAITRA has a team of 1,300 specialists and operates 5 local offices as well as **60+ branches worldwide**. In conjunction with the Taiwan Trade Center (TTC), Taipei World Trade Center (TWTC), and Far East Trade Service (FETS), and supported by alliances with **500+ international affiliates**, TAITRA has formed a global network dedicated to promoting world trade.

TAITRA's five local branch offices in Taoyuan, Hsinchu, Taichung, Tainan, and Kaohsiung provide services to companies outside metropolitan Taipei. Through these domestic offices, TAITRA is able to maintain close contact and interaction with local companies in their respective areas and provide direct and substantial services in areas such as feature trade promotion, business information, market seminars, on-the-job training, procurement meeting, meeting room rental, etc. Branch offices play vital roles in Taiwan Trade Shows coordination between Taipei headquarter and local companies, and invite buyers to visit local industries.

TAITRA Core Missions

- To assist Taiwanese businesses in developing international market.
- To collaborate closely with Taiwanese government in trade policy implementation.
- To provide business consultation service and connect international firms with Taiwanese partners.
- To assume the role of "Smart Integrator" - complement government policies, facilitate industry needs and develop new business opportunities around the world.

USA markets - South America

China markets - Hangzhou, China

European markets - Ho Chi Minh City, Vietnam

Other Markets - Malaysia

Unique Worldwide integration Medical Technology center is about to provide Total Solutions service for you and your company.

Air Transfer System

Air Transfer System
Air transfer system is the number one choice of hospitals for latest patient transfers and patient repositioning. When inflated, a cushion of air beneath the mattress enables caregivers to safely transfer patients without lifting or straining. By reducing injuries related to lateral transfers and repositioning, Air transfer system helps to improve staff retention while meeting legislative guidelines for safe patient handling.

VeriOsteo® OP: Taiwan's First Smart Medical Device

Using Deep Learning Technology for Early Prevention of Osteoporosis

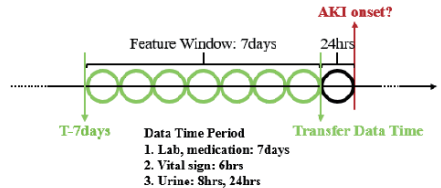

VeriOsteo OP is an AI-assisted screening software for osteoporosis developed by Taichung Veterans General Hospital and Acer Medical Inc. the first AI-assisted screening software for bone mineral density abnormalities approved by the Taiwan FDA (TFDA).

By analyzing chest X-ray images, it predicts the BMD, calculates the T-score from the BMD, and automatically outputs a recommendation on BMD abnormalities, with nearly 90% accuracy. This information assists healthcare professionals in assessing the risk of BMD abnormalities, enabling them to make informed decisions regarding referrals. The software is able to import multiple chest-X ray images by batch and create personalized report for each subject analyzed.

Revolutionary AI-Powered Software for Early Prediction of Acute Kidney Injury

The "Huede AI-Aided Acute Kidney Injury Prediction Software" (Acura AKI®) is a cutting-edge medical assistance tool designed to enhance the quality of care for adult patients in intensive care units. Utilizing machine learning and big data analytics, Acura AKI® can accurately predict patients at high risk of acute kidney injury (AKI) 24 hours before its onset, providing interpretable feature parameters. This enables healthcare professionals to identify and intervene early, thereby reducing the adverse outcomes associated with AKI.

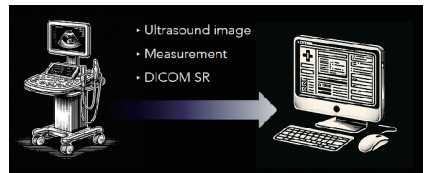

This technology has been granted patents in the Republic of China (Patent No: I796228) and the United States (Patent No: US11937932), as well as received certification from the Taiwan Food and Drug Administration Ministry of Health and Welfare for Software as a Medical Device (Health Department Medical Device Manufacturing No. 008112).

Establishing structured report of echocardiography and use AI to predict valvular heart disease prognosis

Since 2012, we have collaborated with E-WEB Information Company to develop the "Digital Storage Reporting System," digitizing ultrasound images and structurally storing measurement values, with Excel file exportation. Examination measurement results are automatically presented in structured reports, including patients' basic information (such as height, weight, blood pressure, and indications for examination), ultrasound measurement values (approximately 25 fields), and a textual report of approximately 250 to 300 words, accompanied by DICOM files of images.

This system is applied in cardiac outpatient and inpatient, where upon the cardiologist's prescription for a cardiac ultrasound examination, the system automatically generates the patient's case number and examination barcode. Upon arrival at the ultrasound room, scanning the barcode seamlessly integrates the patient's basic information into the structured report.

After a decade of accumulation, we have collaborated with professors from the Departments of Computer Science and Applied Mathematics at Tunghai University to develop AI software for predicting the occurrence and prognosis of cardiovascular diseases in these patients, with research findings published in academic papers.
